## Scanning Probe Microscopy for Energy Research (World Scientific Series in Nanoscience and Nanotechnology) Dawn A Bonnell

Efficiency and life time of solar cells, energy and power density of the batteries, and costs of the fuel cells alike cannot be improved unless the complex electronic, optoelectronic, and ionic mechanisms underpinning operation of these materials and devices are understood on the nanometer level of individual defects. Only by probing these phenomena locally can we hope to link materials structure and *functionality*, thus opening pathway for predictive modeling and synthesis. While structures of these materials are now accessible on length scales from macroscopic to atomic, their *functionality* has remained *Terra Incognitae*. In this volume, we provide a summary of recent advances in scanning probe microscopy studies of local functionality of energy materials and devices ranging from photovoltaics to batteries, fuel cells, and energy harvesting systems. Recently emergent SPM modes and combined SPM-electron microscopy approaches are also discussed. Contributions by internationally renowned leaders in the field describe the frontiers in this important field.

Readership: Students, professionals and researchers in materials science, nanomaterials and new materials.

### **From reader reviews:**

#### **William Chapman:**

Why don't make it to be your habit? Right now, try to prepare your time to do the important work, like looking for your favorite e-book and reading a e-book. Beside you can solve your long lasting problem; you can add your knowledge by the e-book entitled Scanning Probe Microscopy for Energy Research (World Scientific Series in Nanoscience and Nanotechnology). Try to make the book Scanning Probe Microscopy for Energy Research (World Scientific Series in Nanoscience and Nanotechnology) as your pal. It means that it can to be your friend when you sense alone and beside regarding course make you smarter than before. Yeah, it is very fortunated to suit your needs. The book makes you more confidence because you can know everything by the book. So , we should make new experience and knowledge with this book.

#### **Mary Torres:**

The feeling that you get from Scanning Probe Microscopy for Energy Research (World Scientific Series in Nanoscience and Nanotechnology) is the more deep you digging the information that hide within the words the more you get serious about reading it. It does not mean that this book is hard to comprehend but Scanning Probe Microscopy for Energy Research (World Scientific Series in Nanoscience and Nanotechnology) giving you enjoyment feeling of reading. The author conveys their point in selected way that can be understood by simply anyone who read it because the author of this publication is well-known enough. This specific book also makes your own vocabulary increase well. Therefore it is easy to understand then can go together with you, both in printed or e-book style are available. We advise you for having that Scanning Probe Microscopy for Energy Research (World Scientific Series in Nanoscience and Nanotechnology) instantly.

#### **Eric Vegas:**

Reading a book for being new life style in this 12 months; every people loves to study a book. When you examine a book you can get a great deal of benefit. When you read guides, you can improve your knowledge, due to the fact book has a lot of information onto it. The information that you will get depend on what forms of book that you have read. In order to get information about your study, you can read education books, but if you act like you want to entertain yourself you are able to a fiction books, this kind of us novel, comics, and also soon. The Scanning Probe Microscopy for Energy Research (World Scientific Series in Nanoscience and Nanotechnology) will give you new experience in reading through a book.

#### **Jack Williams:**

As a student exactly feel bored for you to reading. If their teacher questioned them to go to the library or make summary for some e-book, they are complained. Just little students that has reading's heart and soul or real their passion. They just do what the teacher want, like asked to the library. They go to generally there but nothing reading really. Any students feel that reading is not important, boring and also can't see colorful

photos on there. Yeah, it is for being complicated. Book is very important for yourself. As we know that on this age, many ways to get whatever we really wish for. Likewise word says, ways to reach Chinese's country. Therefore , this Scanning Probe Microscopy for Energy Research (World Scientific Series in Nanoscience and Nanotechnology) can make you feel more interested to read.
