Molecules of the Mind: The story of the psychological discovery that changed the world Jon Franklin
New York Times Notable Book of the Year

When the history of the Twentieth Century is written, relativity and the opening of the atomic age will probably take a back seat to the revolution in brain science, which forever altered our perception of who we are and why we exist. *Molecules of the Mind* is the Pulitzer prize-winning story of that most personal of sciences, told by a writer who was there - and who is known for his ability to articulate incredibly abstract processes in clear, lucid and page-turning fashion.

"This marvelous book offers the public its first look into the mechanism of what we were once pleased to call the soul," said one reviewer. A religious writer took the opposite stance: "Reading this book is like looking through the gates of hell." Today this New York Times book of the year is still as useful and relevant as the day it was published.
