Biology of the Three-Spined Stickleback (CRC Marine Biology Series)

Biology of the Three-Spined Stickleback (CRC Marine Biology Series)

Highlighting the growing importance of the sticklebacks as a model species in emerging fields such as molecular genetics, genomics, and environmental toxicology, **Biology of the Three-Spined Stickleback** examines data from researchers who use studies of the stickleback to address a wide range of biological issues. This state-of-the-art volume is the first comprehensive review of the biological research on this important fish in more than a decade.

The book presents current knowledge on the geographic and genetic variation of the ubiquitous three-spined stickleback and explores the possibility of any subdivision within currently recognized stickleback species. It provides a summary of important new molecular tools available, and how these tools can be used to study the genetic architecture and molecular basis of evolutionary change in different stickleback populations around the world. The book also lays out their physiology, historical factors, geographic distribution, and describes the features of their biology that seem to promote rapid speciation. It covers reproductive behavior in chronological order, and the mechanisms and selection pressures behind the activities that sticklebacks perform during the different phases of the breeding season.

Full of cutting-edge data, the book discusses the Umwelt of the three-spine stickleback, with particular reference to how that world interacts with and shapes intraspecific communication during the breeding season. It covers developments in stickleback reproductive physiology from 1991 onward and summarizes studies performed — mainly within the fields of behavioral ecology and physiology — on some of the less-studied stickleback species. The book touches on the biology, in particular the behavioral ecology, of the 15-spined stickleback. Emphasizing the importance of the sticklebacks to a variety of disciplines, this book presents information that is both extensive and authoritative.

From reader reviews:

Stephen Louis:

The particular book *Biology of the Three-Spined Stickleback* (CRC Marine Biology Series) has a lot of knowledge on it. So when you check out this book you can get a lot of benefit. The book was compiled by the very famous author. Mcdougal makes some research previous to write this book. This book very easy to read you can find the point easily after reading this book.

Brandon Harmon:

Playing with family within a park, coming to see the sea world or hanging out with pals is thing that usually you might have done when you have spare time, and then why you don't try issue that really opposite from that. One activity that make you not experiencing tired but still relaxing, trilling like on roller coaster you have been ride on and with addition associated with. Even you love *Biology of the Three-Spined Stickleback* (CRC Marine Biology Series), it is possible to enjoy both. It is very good combination right, you still desire to miss it? What kind of hang type is it? Oh can happen its mind hangout men. What? Still don't buy it, oh come on its called reading friends.

Rachel Garber:

Do you have something that you like such as book? The e-book lovers usually prefer to decide on book like comic, quick story and the biggest the first is novel. Now, why not hoping *Biology of the Three-Spined Stickleback* (CRC Marine Biology Series) that give your pleasure preference will be satisfied by simply reading this book. Reading behavior all over the world can be said as the method for people to know world a great deal better then how they react towards the world. It can't be claimed constantly that reading practice only for the geeky person but for all of you who wants to become success person. So , for all you who want to start looking at as your good habit, you can pick *Biology of the Three-Spined Stickleback* (CRC Marine Biology Series) become your own starter.

Elisabeth Martinez:

Many people spending their time period by playing outside together with friends, fun activity with family or just watching TV the entire day. You can have new activity to enjoy your whole day by reading through a book. Ugh, think reading a book can actually hard because you have to bring the book everywhere? It fine you can have the e-book, getting everywhere you want in your Cell phone. Like *Biology of the Three-Spined Stickleback* (CRC Marine Biology Series) which is keeping the e-book version. So , why not try out this book? Let's see.
